

## KB DT-2

Rugged and user-friendly design based on real user feedback.

Binocular stereoscopic vision for greater depth perception.

Independent Flip away & Flip up function equal in a reduced silhouette.

Modular & Independent interpupillary adjustment (IPD).

New Hybrid Composite Material with Electro Magnetic Shielding.

Fully in-field repairability & full spare parts availability.

Feature composable including IR Illuminator, Manual Gain Control & External Power Supply.

Complete range of accessories available including, sacrificial lenses, day training caps, bikini covers laser protection filters, etc.

Compatible with 40° to 47° Lenses and up to 25mm eye relief for improved comfort.

Compatible with MilSpec Tubes ranging from 1800-2500FOMA in Green or White Phosphor.

Compatible with off the shelf Dovetail Mounts including helmets with VAS shrouds.

Compatible with off the shelf Thermal clip-on attachments.

DT-2 is a cutting edge, full MIL-SPEC, image intensified, dual tube binocular that is able to be operated helmet-mounted, head-mounted or hand-held. It offers better depth perception than single tube systems making it easier to judge distances and relative motion so the ability to perform tasks such as driving and navigating is greatly improved.

DT-2 is the ideal choice for special operations forces. For momentary configuration changes, the user can flip away each monocular separately. With both monoculars flipped away and flipped up, the system stows along the contour of the helmet thus reducing its silhouette and neck strain, minimising the danger of system damage.
